

# WHY WE SHOULD PROTECT OUR ENVIRONMENT

*Environmental pollution is one of the key problems faced in our modern need to come together and join hands to protect what is left of our.*

We should avoid littering our roads and highways. The less we pollute our environment, the more we prevent global warming. Treating the environment well is one way to give to the others in your generation. Save the environment to save Life. Buy less disposable products. So, what type of world do you want to leave for your future family? The environment helps in protecting the ecosystem: Changes affecting the ecosystem put multiple species in the danger of extinction necessitating the need of protecting the environment. Also, according to the CDC, water pollution can lead to gastrointestinal illness, reproductive problems, and neurological disorders. So treat the environment well and prove that you indeed have a good personality. But, when we are exposed to too much sun, it can be uncomfortable and lead to skin cancer or many other health issues. We must face the reality and there is no simple solution to it. That may lead to a loss of biodiversity, which may negatively affect our necessities. And guess what? Earth has been so stable and enriching life for millions of years. Over a period of ten or twenty years, our rivers even disappeared due to over use of water and climate change. The trees that are a significant part of the environment helps in keeping the climate cool: trees play a significant role in creating shades on the ground. Nevertheless, trees can also serve as windbreakers, reducing wind speeds of wind-sensitive crops. Why Should we Protect the Environment 5 Indispensable Reasons Planet earth is the only planet with an environment suitable for living beings. When the scale of contamination is too large, it will be too expensive and even impossible to make the water clean once you contaminate it. To heal ourselves we must heal our planet, and to heal our planet we must heal ourselves. But, we need to remember that we were born because of vigorous and health past history of man. Environmental protection encourages better physical health: The quality of air found in the forest can help to improve lung health and there are many recreational activities to be found there as well. Now many people in the west realize that Chinese traditional cultivation is quite sustainable since it feeds thousands of millions of people for thousands of years. In a way, fast growth makes the land deteriorate in the long run.
